

ACTIVITY-BASED BUSINESS MODELING

ABSTRACT OF THE DISCLOSURE

According to the invention, a method for activity-based business modeling for an organization is disclosed. In one step, at least two of an activity entry, a task entry, a resource entry, and a system entry are processed. At least two of the activity entry, the task entry, the resource entry, and the system entry are mapped together. After the processing, a forward-looking report is generated. The report is related to at least two of the activity entry, the task entry, the resource entry, and the system entry.
